## **The Inquiry Learning Cycle**

The Guided Inquiry Approach is an innovative teaching approach that has been shown to dramatically improve student learning in mathematics. This

approach empowers students to actively explore and construct mathematical knowledge, rather than passively receiving it from their teachers. As a result, students develop a deep understanding of concepts and cultivate problem-solving skills that they can apply to real-world situations.

The Guided Inquiry Approach is based on the principles of constructivism, which posits that learning is an active process in which learners construct new knowledge based on their own experiences. In a Guided Inquiry classroom, students are given opportunities to explore mathematical concepts through hands-on activities, investigations, and discussions. The teacher's role is to guide students in their learning by providing scaffolding and support, but ultimately it is the students who are responsible for constructing their own understanding.
